ABSTRACT

The invention enables "low attention recording," i.e.,  
10 recording that need not appreciably affect interaction of a  
recorder (i.e., a person in control of a recording unit  
according to the invention) or others with the environment in  
which the recording is taking place. The low attention  
recording enabled by the invention can be particularly  
15 advantageously employed in "social recording," i.e.,  
recording in which multiple participants in an event are  
recording the event. As described in more detail below,  
advantageous aspects of the invention can be provided by a  
small, lightweight, wearable recording unit.
